Function

COUNTIS P3x are three-phase modular electrical energy meters that enable viewing of the different energies consumed and produced, and also of powers and other measurements directly on the backlit LCD display. They enable direct connection up to 100 A and are suitable for use in sub-billing applications thanks to their MID certification.

Advantages

Compact design

Only four modules wide for measuring three-phase loads up to 100 A to save space in electrical panels.

MID certification

The whole range complies with the MID directive to guarantee accuracy and reliability when metering, compulsory for energy billing applications. The "module B+D" certification attests that an external laboratory has verified the design and production process of these devices.

Versatile

- Operating temperature range from -40 to +70°C.
- Possibility of connection to a single-phase network with possible per-phase reading of energies.

Easy integration

COUNTIS P3x meters are natively compatible with the WEBVIEW energy monitoring software. Thanks to the automatic detection of the meters for quick configuration, this software is very easy to use. It is accessible via a DIRIS Digiware M-70 or D-70 gateway.

Multi-interfaces

COUNTIS P3x meters are equipped with:

- Two pulse outputs, enabling energy consumption information to be sent in the form of pulses.
- An RS485 (MODBUS RTU) or M-BUS communication output, which enables all meter data to be read remotely via the communication protocol.
- A digital input to manage 2 tariffs, or up to 4 tariffs via communication, to distinguish between consumption according to tariff periods.
